INTRODUCTION

An estimated 8.6 million children in the United States lacked health insurance coverage in 2007. That same year, Congress debated and passed two pieces of legislation that would have reduced the number of uninsured children by almost half, covering as many as 4 million additional children. President Bush vetoed both bills. Since then, the mounting national economic crisis has driven up unemployment rates at a time when working families are already struggling with the rising cost of everything from gasoline to health insurance premiums. When the economy plunges, the number of uninsured Americans typically increases. This, in turn increases demand for safety net programs like Medicaid and the State Children's Health Insurance Program (CHIP). According to the most recent Census data, Texas currently has the highest percentage of uninsured children in the nation (20.5 percent).

Just a year ago, states were working to expand coverage in CHIP to finish the job of covering uninsured children. Since then, the Bush Administration's opposition to expanding CHIP and the national economic recession have put new pressure on states to deal with increasing demand for coverage, while their budgets are facing shortfalls.

This report presents data generated by the U.S. Census Bureau from the Current Population Survey (CPS), a national survey of health insurance coverage that is performed annually. Families USA contracted with the Census Bureau to provide detailed national and state-level data about health insurance coverage for children between the ages of 0 and 18. (For state-level estimates, a three-year data merge [2005-2007] was used to improve data reliability. A detailed methodology is available upon request.) This report examines these new data and what they mean for the future of children's health coverage in Texas and around the country.

KEY FINDINGS

1.4 Million Children Are Uninsured in Texas

- More than one in five children in Texas is uninsured (20.5 percent of Texas's children). (Table 1)
- Texas has more uninsured children than any other state in the nation.
- Texas also has a higher percentage of children in the state without health insurance than any other state in the nation.

Table 1. All Children in Texas

Coverage	Texas		U.S.	
	Number	Percent	Number	Percent
Medicaid	1,887,000	27.6%	21,511,000	27.6%
Other Public Coverage*	228,000	3.3%	2,241,000	2.9%
Private Coverage	3,317,000	48.5%	45,522,000	58.4%
Uninsured	1,400,000	20.5%	8,618,000	11.1%
		100.0%		100.0%

Source: Analysis conducted by the Census Bureau for Families USA based on the Current Population Survey. National data reflect the 2007 CPS, while state data reflect a three-year merge of the 2005-2007 CPS data. (A detailed methodology and more information about sample sizes and confidence intervals are available upon request.)

* Other public coverage includes Medicare and the Civilian Health and Medical Program of the Uniformed Services (CHAMPUS).

Texas's Uninsured Children Come from Working Families

- The vast majority of uninsured children in Texas (89.5 percent) come from families where at least one parent works. (Table 2)
- Nearly three-quarters of uninsured children (73.9 percent) in Texas live in households where at least one family member works full-time, year-round. (Table 2)
- Still, 65.7 percent of Texas's uninsured children come from low-income families (families with income below twice the poverty level, or \$35,200 for a family of three in 2008) who are likely eligible for Medicaid or CHIP. (Table 2)

Most Uninsured Children in Texas Come from Two-Parent Households

- Among uninsured children living with a parent, almost two-thirds (65.1 percent) live in two-parent households. (Table 2)

Table 2. Uninsured Children in Texas

	Texas		U.S.	
	Number	Percent	Number	Percent
Income*				
0-200% of poverty	910,000	65.7%	5,164,000	60.4%
201-400% of poverty	374,000	27.0%	2,450,000	28.7%
401% of poverty or more	101,000	7.3%	931,000	10.9%
		100.0%		100.0%
Family and Working Status*				
Uninsured Children with at Least One Working Parent	1,129,000	89.5%	6,737,000	88.2%
Uninsured Children with at Least One Parent Working Full-Time	933,000	73.9%	5,230,000	68.5%
Uninsured Children in Two-Parent Families	822,000	65.1%	4,489,000	58.8%

Source: Analysis conducted by the Census Bureau for Families USA based on the Current Population Survey. National data reflect the 2007 CPS, while state data reflect a three-year merge of the 2005-2007 CPS data. (A detailed methodology and more information about sample sizes and confidence intervals are available upon request.)

* Note that statistics for income and family and working status do not add up to the total number of uninsured children in the state because data availability for these indicators is more limited. More information is available in the detailed methodology.

DISCUSSION

Who Are Texas's Uninsured Children?

Texas is home to more uninsured children than any other state in the country. It also has the highest rate of uninsured children.¹ Contrary to popular belief, the majority of uninsured children in Texas come from families where at least one parent works (see Table 2). And nearly three-quarters of uninsured children (73.9 percent) live in a home where at least one parent works full-time, year-round. Uninsured children tend to come from low-income, working families that are trying to make ends meet, but coming up short when it comes to health coverage. Their employer might not offer coverage, or the offer might be far too expensive for the family to afford. In 2007, the average annual out-of-pocket cost to an employee for family coverage in Texas was \$3,212,² an

amount that is more than 9 percent of annual income for a family of three earning \$35,200 (twice the federal poverty level). For parents who are forced to seek coverage in the private market because they do not have access to affordable employer-based coverage, costs can be even higher. And some may not be able to obtain coverage at all. This is why Medicaid and CHIP play such an important role; they offer children in these families high-quality, affordable coverage.

Strengthening Texas's Safety Net for Children

In Texas, children with family income below twice the poverty level (\$35,200 for a family of three in 2008) are eligible for Medicaid or CHIP. With more than 65 percent of the uninsured children in the state in families with incomes below this level, many children who are eligible for coverage are missing out. Moreover, these statistics do not begin to capture how the national economic crisis is affecting the state's economy. With rising unemployment rates, mounting gas and food prices, and many families struggling simply to keep a roof over their heads, experts expect further growth in the number of Americans without health insurance.³ Demand for Medicaid and CHIP will increase and, unless these programs are funded sufficiently, so will the ranks of Texas's uninsured children.

In 2007, Congress and President Bush debated renewing and strengthening CHIP. The program needed more money to keep up with the increasing cost of health coverage for the children who were already enrolled and to meet the growing need of those who were not (and that was before the economic crisis erupted). But despite strong bipartisan support in Congress for expanding CHIP to cover as many as 4 million more uninsured children, the reauthorization process ground to a halt following two presidential vetoes.

The program was ultimately extended through March 2009, and states were provided a little extra money to help maintain their programs. But without a strong reauthorization that includes adequate new federal funding, it is difficult for states to cover more uninsured children in CHIP. Nearly half of the states are facing budget shortfalls for fiscal year 2009, and at least 17 states have implemented or are considering cuts to health programs to meet budgetary demands.⁴ Although Texas is not currently facing a budget shortfall or cutting health programs, the tide could turn quickly in this tumultuous economy. Medicaid and CHIP are often targets when states need to make budget cuts. Those kinds of cuts would only exacerbate existing problems with children's coverage in Texas.

Medicaid and CHIP Are Crucial

Children make up about half of Medicaid's 42 million enrollees. All children enrolled in Medicaid are guaranteed a benefit package that will cover all the children's medically necessary health care needs, referred to as Early and Periodic Screening, Diagnosis and Treatment (EPSDT). Most families pay nothing or only small copayments for their children's Medicaid coverage. This ensures that even very impoverished families can afford to take their children to the doctor.

CHIP was created in 1997 in response to the rising number of American children without health insurance. More than 11 million children were uninsured in 1998: As CHIP took hold across the country, this number rapidly declined. The program sits on top of each state's Medicaid program, providing an affordable source of coverage for children in working families that make too much money to be eligible for Medicaid, but still cannot afford other forms of coverage. Over the years after CHIP was implemented, despite steady and sizeable increases in the number of uninsured adults, the number of uninsured children declined by nearly a third.⁵ Children enrolled in CHIP are more likely to have a usual source of care, have fewer unmet health care needs, and experience improved access to dental care compared to uninsured children.⁶ CHIP has also been shown to reduce racial and ethnic disparities in access to health care.⁷ It is widely regarded as a successful program and provided coverage for more than 7 million children during 2007.⁸

Next Steps

The new Congress and President should take the following steps in early 2009 to shore up the health care safety net for children:

- **Temporarily increase federal support for Medicaid**

During the last significant economic downturn, one of the steps Congress took to boost state economies and fortify Medicaid was to enact a 15-month increase in the federal matching rate for the program. In exchange for the increased federal support, states had to agree not to cut their Medicaid programs. This simultaneously boosted ailing state economies, provided relief to state budgets strained by rising Medicaid costs, and ensured

the program's availability to vulnerable Americans during the downturn. Because Medicaid is a countercyclical program (enrollment increases when the economy declines), states must spend more money on the program at a time when they have decreased revenue and strained budgets. Temporarily increasing the federal Medicaid matching rate gives *immediate* relief to states—who are saddled with increasing Medicaid costs—and allows them to continue the program *without cutting eligibility or services*. The injection of new federal dollars into state economies also creates additional business activity, jobs, and wages.

Bills were introduced in both the House and the Senate in 2008 to boost the Medicaid matching rate, but they were ultimately not included in the economic stimulus package Congress passed.⁹ The economy is now in worse shape than it was when the first stimulus bill was passed, and there is interest among members of Congress in passing a second stimulus package. Any future stimulus package should include an increase in the Medicaid matching rate to improve state economies and to ensure that Medicaid will be there for the growing numbers of people who will need it, a large portion of whom are children.

■ **Reauthorize CHIP**

The program's current extension expires March 31, 2009. It is crucial that Congress take action before this deadline to guarantee future federal support for the program. An estimated 710,700 children in Texas received coverage through CHIP in 2007.¹⁰ If state policy makers enter their 2009 legislative sessions without a guarantee of continued federal support for CHIP, many are likely to halt expansion plans, and others may need to make outright cuts in order to meet state budget requirements.

It is of utmost importance that the next Congress and the new President take these important steps to strengthen Medicaid and CHIP. As the economy continues to deteriorate, more and more families will likely lose employer-based coverage and, if the safety net is not strong enough to respond to this growing demand, low-income children in Texas and around the country will suffer.
