FEDERAL PUBLIC
HEALTH DOLLARS
ARE SPENT

TRUST FOR AMERICA'S HEALTH

IS A NON-PROFIT, NON-PARTISAN ORGANIZATION
DEDICATED TO SAVING LIVES BY PROTECTING THE
HEALTH OF EVERY COMMUNITY AND WORKING TO
MAKE DISEASE PREVENTION A NATIONAL PRIORITY.

Introduction

Your health should not be determined by where you live.

Americans across the country deserve and should expect basic health protections.

Yet, currently, many disease rates vary significantly from city to city and region to region, and without better public health systems in place, scientists can't really tell you why. Fundamental public health services intended to protect our health and the funding of these programs often vary dramatically from state-to-state and among communities within states.

There is no systematic approach for ensuring a minimum level of health services for all Americans, or that the money spent on public health programs is being used in the

most effective ways to reduce and prevent disease and injury. No independent source is available that directly or routinely analyzes the impact of public health spending and compares that spending with people's health. In fact, there is no consistent accounting of how much money is spent on public health programs by the federal government, states, and local communities.

This document is the first step in a challenge by Trust for America's Health (TFAH) to policymakers and public health professionals to start spending smarter. TFAH reviews key health statistics and a range of federal public health funds that each state receives.

WHAT IS "PUBLIC HEALTH?"

The term "public health" is used to describe either (1) the health of the public; or (2) the approximately 3,000 federal, state, and local health agencies in the U.S. (and more around the world), who often work closely with private sector, voluntary, and professional health associations.

WHAT ARE THE PRIMARY CONCERNS FOR PUBLIC HEALTH?

Public health focuses largely on disease prevention and preparedness for health emergencies.

Chronic Disease Prevention: Public health professionals search for ways to reduce disease rates by investigating trends and patterns of the public's health to identify causes and cures. There has been a major emphasis during the past several decades on studying chronic diseases, including cancer, diabetes, and heart disease, which are responsible for seven out of 10 American deaths each year.¹ Public health professionals research strategies and interventions, such as changes in diet and lifestyle, which can help people to lead healthier lives.

Infectious Disease Prevention: Public health professionals also monitor the health of communities by watching for infectious disease outbreaks, and identifying the best ways to contain or stop the spread of diseases ranging from tuberculosis to HIV/AIDS to the seasonal flu. Providing immunizations to prevent such diseases, where applicable, is also a critical role of public health. Among the best known disease "detectives" are the staff of the CDC's Epidemiologic Intelligence Service (EIS) (<http://www.cdc.gov/eis/index.htm>), who are dispatched to the scene of potential outbreaks and have responded to many of the major outbreaks that have affected the nation.

Disease, Disaster, and Bioterrorism Preparedness: Public health professionals are on the front lines of developing America's capacity for preventing or containing major disease outbreaks, including those caused by acts of bioterrorism. They also provide wide-scale treatment to the survivors of major disasters.

Public Health Programs Must Receive Increased and Sustained Funding to Help Improve the Health of Americans

Financial support for public health programs comes from a combination of federal, state, and local funds.

The Federal Investment

In 2005, the average per capita federal investment in public health via the Centers for Disease Control and Prevention (CDC) was \$20.99.² Per capita CDC funding for states ranged from Alaska at \$53.36 to Florida at \$11.38.

Approximately 80 percent of CDC funds are redistributed to states and private partners.³ These funds are intended to support a variety of services and programs, ranging from key disease prevention initiatives to bioterrorism preparedness.

The amount of federal support states receive varies greatly. Funds are distributed through a combination of grants:⁴

- Some are grants driven by formulas based on population;
- Many are competitive grants – where funding is based upon which grants are applied for and the relative merit of grant applications; and

- Some are need-based formula grants – often based on the prevalence of a condition.

On the following state profile pages, TFAH has highlighted a number of key CDC and HRSA programs and has documented the support each state receives for programs which provide essential services that help reduce illness and help save lives.

Highlighted programs include bioterrorism preparedness, cancer prevention, chronic disease prevention and health promotion, diabetes control, environmental health, HIV prevention, immunization, infectious disease prevention, the preventive health and health services block grant, tobacco law suit settlement dollars, Ryan White CARE Act (Titles I and II) grants, the maternal and child health block grant, primary health care grants, and health professions grants. See Appendix C for more information and notes on data and methodology.

For this document, TFAH examined FY 2005 per capita funding to the states and the District of Columbia (DC) from the Centers for Disease Control and Prevention (CDC). Only portions of the Health Resources and Services Administration's (HRSA) funding to the states for FY 2005 were made publicly available or available to TFAH upon request, and, therefore, its programs were not included in the state totals or per capita analyses of this study.

TFAH assembled information about key health statistics that are available on a state-by-state basis from a range of sources, including:

- CDC's Behavioral Risk Factor Surveillance System (BRFSS)
- American Cancer Society's Cancer Facts and Figures 2005
- CDC's Division of Vector-Borne Infectious Diseases, including ArboNET

- CDC's HIV/AIDS Surveillance Report 2005 (Accessed at statehealthfacts.org)
- CDC's Youth Risk Behavior Surveillance (YRBS)
- CDC's National Immunization Survey
- National Center for Health Statistics "National Vital Statistics Reports"
- HRSA's Bureau of Health Professions
- HRSA's Bureau of Primary Health Care
- HRSA's HIV/AIDS Bureau
- CDC's National Center for Environmental Health

The per capita averages were calculated by dividing federal funds by the July 2005 state population estimates from the U.S. Census Bureau.

SUMMARY OF CDC DOLLARS – FY 2005

State*	Total Funds (All Categories)	Per Capita Total	Per Capita Ranking
Alaska	\$35,412,410	\$53.36	1
Pennsylvania	\$551,955,617	\$44.41	2

U.S. TOTAL	\$5,931,232,886	\$20.99	NA*

*DC was not included in the per capita rankings because it receives different funding levels than the 50 states.

WHAT SHOULD THE FEDERAL GOVERNMENT'S PUBLIC HEALTH OBLIGATION BE?⁵

In partnerships with states, the federal government has an obligation to:

- Assure the capacity of all levels of government to provide essential public health services;
- Act when health threats may span many states, regions, or impact the entire country;
- Act where solutions may be beyond the jurisdiction of individual states;
- Act to assist states when they do not have the expertise or resources to mount an effective response to a public health emergency such as a natural disaster, bioterrorism, or an emerging disease; and
- Facilitate the formulation of public health goals in collaboration with state and local governments and other relevant stakeholders.

The States' Investment

In fiscal year 2005, **per capita public health funding from state governments** ranged from \$123.10 (Hawaii) to \$3.76 (Nevada)⁶ The average state spent approximately \$35 per capita with nearly 30 states spending less than that.

According to a 2002 Health Affairs article by U.S. Senate Majority Leader Bill Frist, MD, state and local funding support was approximately 2.5 times the federal level, accounting for 70 percent of public health spending.⁷ [This did not include the approximately \$1.3 billion additional annual allocation of new bioterrorism and public health preparedness grants appropriated to states after September 11, 2001.]

Each state allocates and reports its budget information in a unique way, making comparisons among states difficult, and the analysis of the effectiveness of funds nearly impossible.⁸ Other sectors have adopted consistent budget practices to allow for useful comparisons and to better inform policy decisions. For instance, colleges and universities must report expenditure data by standard category to the Higher Education Coordinating Board. It coordinates oversight and reporting and has a nationally standardized data reporting system (IPEDS) administered by the U.S. Department of Education.

To help gain some understanding and basis for comparisons across states, TFAH performed an analysis of state budgets related to public health. This analysis is based on state budgets and appropriations bills for the agency, department, or division in charge of public health services for state FY 2005. TFAH chose to define “public health services” broadly, including most state-level health funding, with a few notable exceptions such as state Medicaid expenditures. More details about public health budgets in states can be found in Appendix F.

State Public Health Budgets¹

State	FY 2004-2005	04-05 Per Capita	Per Capita Ranking

¹ New York and Louisiana have been excluded because the state share of Medicaid, CHIP, and/or other social service programs could not be disaggregated, causing the per capita spending to be disproportionately higher. DC was not included in the per capita rankings because it receives different funding levels than the 50 states.

² Includes some social service programs, but not Medicaid or CHIP

³ Only state's general fund used.

⁴ Biennium budget - FY2003-2005 biennium displayed; per capita based on one year's funding only.

⁵ Taken from Appropriations bills rather than detailed budget docs; may include more or less detail than other states.

WHAT SHOULD STATE AND LOCAL GOVERNMENTS' PUBLIC HEALTH OBLIGATIONS BE?

States and localities have an obligation to:

- Fulfill core public health functions such as diagnosing and investigating health threats, informing and educating the public, mobilizing community partnerships, protecting against natural and human-made disasters, and enforcing state health laws;
- Provide relevant information on the community's health and the availability of essential public health services. This information should be integrated with reporting from local hospitals and health care providers to show how well public concerns and health threats are being addressed. These reports should also be publicly available and utilized by public health departments to work collaboratively with hospitals, physicians, and others with a role in public health to set health goals;
- Work collaboratively with the multiple stakeholders who influence public health at the community level in designing appropriate programs and interventions that address key health problems and improve the health of the region; and
- Respond to complex, poorly understood problems by acting as a "laboratory of the states." States and localities are closer to the general public and to the various factors causing ill health.

Some Ongoing Challenges Concerning Government Roles and Responsibilities

1. A lack of clear roles among state, local, and federal health agencies, and fragmented responsibilities.
 - In 2005, Hurricane Katrina was a tragic, graphic demonstration of many of the challenges and complications resulting from the lack of clear roles and responsibilities among different governmental jurisdictions.
 - The threat of a pandemic flu outbreak, including concerns about preparations at the state and local levels, further highlight the importance of public health professionals to our nation's health and security.
2. No minimum standards, guidelines or recommendations for levels of capacity or service are required of state and local health departments. This results in wide differences in services and competencies among state and local agencies. Additionally, the lack of mandatory, standardized, and integrated health statistics hampers the development of systems of accountability, measures of effectiveness, and public health research.
3. Problems arising from federal funding largely based on "categorical" grants, which are often program focused, designated funds which are restricted to specific program use, and lack a system of accountability. "Categorical" grant funding does not go to fund broader or core public health responsibilities.

Recommendations

The current model for supporting public health in America is broken. If we don't fix it, millions of Americans will continue to suffer from preventable illness and injury.

The first step is to better understand the problems, define the resources required, and determine how to better target those resources.

1. The nation must make increasing and sustaining support for essential disease and injury prevention services a higher priority.

A. Americans deserve coordinated and effective public health programs and spending. Federal, state, and local governments share responsibility for improving the public's health. The federal government could

begin by creating more incentives for states to invest more in public health programs, such as matching requirements and greater accountability and transparency measures for ongoing receipt of federal funds.

2. The connection between spending and health must be systematically studied.

A. Americans deserve better information about their health and the health of their communities. Collection of health statistics must be standardized and integrated in a way that allows for useful analyses and meaningful comparisons.

health programs. States should adopt consistent budget practices to allow for useful comparisons and better informed policy decisions

B. Americans deserve more information about how their money is being spent. There needs to be more clarity and transparency in how funds are spent on public

C. Americans deserve to know how effectively their money is being used. An ongoing system of measurement must be developed to review the relationship between how dollars are spent and the impact on people's health.

3. A better understanding of the health of Americans must also be achieved to allow for targeted, smarter investments where they are most needed.

A. Americans deserve services that improve the health of their communities. Funds must be better targeted to address the highest priority programs in the communities where the resources are most needed. Greater transparency in services and funding would allow public health professionals to better identify the priorities facing communities and strategies to help improve our health.

B. Americans deserve a level of guaranteed minimum protection against the major health threats everyone faces. There are many health issues outside of our individual control, such as whether communities are prepared to respond to a pandemic flu outbreak, bioterrorism threat, or to investigate rising rates of asthma in a community. Americans in every community should expect a basic level of protection against such health threats.

HOW MUCH WOULD IT TAKE TO ADDRESS THE DISPARITIES AMONG STATES? ABOUT \$2.6 BILLION.

TFAH estimates that an additional annual investment of about \$2.6 billion would be required to bring public health spending to the level that should have been spent on public health protections for all Americans over the last decade. Additional funding will be required to support new and future responsibilities being placed on public health with regard to chronic diseases, pandemic preparedness, information technology, and other activities.

TFAH arrived at its estimate of \$2.6 billion by examining two data sources: state spending for public health and public health spending as a percentage of national health expenditures.

1. An analysis of state public health budgets from FY 2004-05 demonstrates that per capita state level public health spending varies greatly across states, ranging from \$4 to \$123.¹⁰ The national per capita average is approximately \$35. To bring those 30 states spending less than \$35 per resident up to the national average would require a targeted annual investment of \$2.6 billion, assuming no other significant change in public health spending at the state level. It is important to remember that \$35 is only a benchmark based on current funding levels. For states with particularly large vulnerable populations or in those states that are more prone to natural or terrorist disasters, there are different funding needs that must be taken into account.

This figure only considers current state spending; it does not include local funding or federal funding. Additional analyses are underway to assess variations in local funding, including an expected local public health agency report to be released by the National Association of City and County Health Officials. (See Appendix F for state level public health methodology.)

2. National Health Expenditure (NHE) data suggest an annual investment of \$4.3 billion to achieve a steady, sustained level of support for public health activities. The Department of Health and Human Services (HHS) has tracked public health spending as a share of NHE over the last 40 years. The portion counted as “public health” has changed over time, but based on the 20-year high in 2002 of 3.2 percent, if this level of funding had been maintained, an additional \$4.3 billion dollars in federal, state, and local funding would have been available for public health programs in 2004, the most recent year of data available.

However, the NHE uses a very broad definition of public health services: “spending by governments to organize and deliver health services and to prevent or control health problems.” When personal health care services and prescription drug costs are taken into account, a downward adjustment to the \$2 to \$3 billion range for population health services is both appropriate and consistent with the NHE data.

Experts have had difficulty in reaching a consensus view of how much it would take to build a modernized public health system — one that supports and recognizes the comprehensive mission of public health in the 21st century — ranging from control of communicable diseases to preventing chronic diseases, and protecting the public from terrorism while simultaneously building an IT infrastructure crucial to all of these functions.

Research in this area has been increasing, acknowledging that policymakers and the public want more information about what it would take to improve the public health system and how increased funds would be used. The estimates are wide ranging; for instance, one study estimates that an increased investment of \$60 per person is needed, which would total \$18 billion annually across the country.¹¹ Another hypothesized that nearly \$2 billion would be needed just at the local level to standardize spending across the nation.¹²

To help reach a consensus on the needed investments, TFAH recommends that the federal government convene an Intergovernmental Public Health Coordinating Committee with the Secretary of HHS and representatives from state, tribal, and local health departments, to undertake a systematic analysis to (1) accurately assess the current level of spending on core public health activities at all levels of government; (2) describe and determine the cost of a modernized public health system; (3) determine what balance of investments -- both one-time and annual -- is needed from federal, state, and local governments; and (4) realistically determine the pace at which such investments could be made and absorbed.

There are various options worth considering to fund this new investment:

- The federal government could make a sizeable investment to level the playing field across states. Ensuring a sound public health system in every community and for all citizens is of national importance; people's health shouldn't be determined by where they live.
- A cost sharing model between the federal government, states, and localities could continue with increased investment at one or all levels.
- An updated version of the cost sharing model could also be considered that would make federal support partially contingent on state and local government investment and performance. For example, additional federal funds could be provided to states *only* if they demonstrate that they are meeting particular objectives and maintaining and/or increasing their current level of funding and activity for public health programs and services. Agencies should also be required to collect and make publicly available all financial data. It is also important that agencies at every level of government have some form of accountability with respect to reporting to their communities. This is a similar approach to many other HHS programs.

Appendix A:

HEALTHY PEOPLE 2010

Every decade, the U.S. Department of Health and Human Services (HHS) defines national objectives for reducing disease and improving health in a document called Healthy People.¹³ Overall, the progress toward achieving most of these goals is falling far short, and there has not been suf-

ficient funding or strategies to result in wide-scale change. In the past year, however, the U.S. has reached its target goal for childhood immunizations. In 2004, 80.9 percent of children received their recommended vaccinations; the Health People 2010 goal is 80 percent.¹⁴

Selected Healthy People 2010 Health Indicators

Target Goal for the Year 2010	Recent Status Check
Reducing obesity levels to 15 percent for adults and five percent for children and adolescents.	<ul style="list-style-type: none"> • Adult obesity levels are 16 percent or more in every state,¹⁵ and more than two-thirds (64.5 percent) of the U.S. adult population is overweight or obese.¹⁶ • Forty-three states have obesity levels above 20 percent for adults; 12 states have levels exceeding 25 percent.¹⁷ • More than half of adults in every state are either obese or overweight, and in 23 states, more than 60 percent of adults are overweight or obese.¹⁸ • In 22 out of 31 reporting states, 10 percent or more of high school students are overweight.¹⁹
Reducing tobacco use to 12 percent of adults and 16 percent of adolescents.	<ul style="list-style-type: none"> • In 2002, 23 percent of adults were current smokers.²⁰ • In 2003, 22 percent of high school students used tobacco products.²¹
Increasing immunization rates to 90 percent for senior citizen (ages 65 and over) influenza vaccinations.	<ul style="list-style-type: none"> • In 2003, 68 percent of adults over 65 received a flu vaccine.²²

Appendix B:

FEDERAL AGENCIES INVOLVED IN PUBLIC HEALTH

FEDERAL STRUCTURE AND AUTHORITY

The federal agency with primary responsibility for public health activities is **HHS**. Within HHS, the **Public Health Service** conducts various health functions including disease control, health regulation, and research and direct provision of services.²³ It is mainly comprised of:

- **The Assistant Secretary for Health**
- **The Assistant Secretary for Public Health Emergency Preparedness (ASPHEP)**
- **Agency for Healthcare Research and Quality (AHRQ)**
- **Agency for Toxic Substances and Disease Registry (ATSDR)**
- **Centers for Disease Control and Prevention (CDC)**
- **Food and Drug Administration (FDA)**
- **Health Resources and Services Administration (HRSA)**
- **Indian Health Service (IHS)**
- **National Institutes of Health (NIH)**
- **Substance Abuse and Mental Health Services Administration (SAMHSA)**

In addition to HHS, over 50 federal agencies and departments are involved in some aspect of public health.

Department of Agriculture (USDA): Through the **Center for Nutrition Policy and Promotion**, the **Food Safety Inspection Service**, the **Animal and Plant Health Inspection Service**, and the **Animal Research Service**, the USDA is involved in a range of health-related initiatives. These include ensuring the safety of meat, poultry, and egg products; tracking the impact of infectious diseases on U.S. livestock and poultry; promoting healthy food and nutrition initiatives; and overseeing practices to provide safe drinking water to rural America.

Department of Defense (DOD): Administers major health care and prevention programs, runs BSL-4 lab, and funds research for various diseases through such divisions and initiatives as the **U.S. Army Medical Research Institute of Infectious Diseases**, the **Armed Services Blood Program Office**, and the **Global Emerging Infections Surveillance and Response System**.

Department of Education (ED): The **Office of Safe and Drug-Free Schools (OSDFS)** oversees physical education, mental health, drug education, and anti-violence campaigns designed to promote national student health and a safe school-going experience.

Department of Energy (DOE): The **Office of Environmental Management** ensures the safe handling of waste generated by energy production; tests soil, air, and water near energy sites; and supports epidemiological research on the health effects of radiation exposure.

Department of Homeland Security (DHS): Through divisions such as **Border and Transportation Security** and **Emergency Preparedness and Response**, works to prevent terrorist attacks and plans for effective response procedures to threats. Specific health-related initiatives focus on enforcing animal and plant embargoes and improving the public health system's readiness for a bioterrorist attack.

FEDERAL STRUCTURE AND AUTHORITY

Department of Justice (DOJ): Bureau of Alcohol, Tobacco, Firearms, and Explosives (ATF), formerly housed in the Department of the Treasury, oversees initiatives designed to protect the public from health risks posed by illegal distribution and sales of alcohol, tobacco, and firearms.

Department of Labor: The **Occupational Safety and Health Administration (OSHA)** and the **Mine Safety and Health Administration (MSHA)** promote standards and regulations to protect the health and safety of workers in the U.S.

Department of Transportation (DOT): The **National Highway Traffic Safety Administration (NHTSA)** promotes vehicle safety and healthy behavior on U.S. highways through public health-related practices such as anti-drunk driving initiatives and seat belt laws.

Department of the Treasury: Promotes the compliance of alcohol and tobacco product manufacturing, marketing and importation with federal laws, and oversees the collection and levy of related taxes through the **Alcohol and Tobacco Tax and Trade Bureau**.

Department of Veterans Affairs (VA): Offers public health and medical services (including veterans health benefits), engages in collaborative medical and health research, and is on-call for mobilization duties in the advent of emergencies and disasters.

Environmental Protection Agency (EPA): Sets and enforces standards for air and water quality, pesticide use, waste and recycling, and chemical use, and researches and partners with local and state agencies to assess environmental impact of disease.

Independent Establishments and Government Corporations

Consumer Product Safety Commission (CPSC): Oversees consumer product safety initiatives, including monitoring health hazards in toys, cribs, power tools, cigarette lighters, and household chemicals.

Federal Trade Commission (FTC): Enforces federal truth-in-advertising laws on claims for weight-loss advertising, foods, drugs, dietary supplements, and other products promising health benefits. Monitors unfair practices, including deceptive claims on tobacco and alcohol advertising, and reports to Congress on cigarette and smokeless tobacco labeling, advertising, and promotion.

Nuclear Regulatory Commission (NRC): Regulates use of nuclear materials. Works in conjunction with environmental and public health professionals to plan for and respond to potential nuclear emergencies (such as Three Mile Island).

President's Commission on Physical Fitness: Recommends programs to the President and the Secretary of Health and Human Services that encourage nationwide participation in physical fitness, physical activity and sports activities.

Appendix C:

NOTES ON DATA AND METHODOLOGY

The sources for the funds and indicators come from a variety of publicly available sources. In some cases fiscal years for funding may vary depending on availability of data; year of health indicators may vary slightly as well.

Funding References

CDC Bioterrorism FY 2005 data were provided by the CDC, as well as a HHS press release, May 13, 2005. Available at <<http://www.hhs.gov/news/press/2005pres/20050513.html>>. These funds are awarded as cooperative agreements based on a base allocation, and are then supplemented based on population. The funds are intended to support preparedness planning, surveillance and epidemiology, laboratory capacity, information technology, communications, and education and workforce training.²⁴

CDC Cancer Prevention FY 2005 data were provided by the CDC. These funds support a variety of programs such as cancer prevention and control programs and campaigns and initiatives addressing different types of cancer.²⁵

CDC Chronic Disease Prevention/Health Promotion FY 2005 data were provided by the CDC. This funding may support heart disease and stroke programs that monitor those with high blood pressure or high cholesterol; programs that address physical inactivity, poor nutrition and obesity; and various research centers across the country that are examining ways to live healthier lives.²⁶

CDC Diabetes Control FY 2005 data were provided by the CDC. These funds support diabetes prevention and control programs in all 50 states and Washington, D.C. They work with high-risk populations, and promote diabetes care, control, and education both for health professionals and the general public.²⁷

CDC Environmental Health FY 2005 data were provided by the CDC. This funding may support programs such as the Childhood Lead Poisoning Prevention Program, the National Asthma Control Program, drinking water safety, and a variety of surveillance programs.²⁸

CDC HIV Prevention FY 2005 data were provided by the CDC. These funds support various prevention programs and behavioral research, as well as local community programs and technical assistance.²⁹

CDC Immunization FY 2005 data were provided by the CDC. This funding may support the Vaccines for Children Program, assure availability of yearly influenza vaccinations, and work to educate the public about the importance of childhood immunizations.³⁰

CDC Infectious Diseases FY 2005 data were provided by the CDC. These funds may support West Nile Virus surveillance and prevention, protection from and research on emerging diseases, and the tracking and prevention of foodborne illnesses.³¹

CDC Preventive Health & Health Services (PHHS) Block Grant FY 2005 data were provided by the CDC. The PHHS block grant helps increase funding to states and local communities to support general prevention efforts and respond to emerging health threats, as well as work to prevent leading causes of disease and death. Much of this money goes to funding programs for which states cannot get or use categorical funding.³²

CDC Tobacco FY 2005 data were provided by the CDC. These funds support general tobacco prevention and control programs in the states.³³

Total CDC Funds for State and Local Health Departments and Other Public/Private Agencies FY 2005 data were provided by the CDC.

CDC Per Capita Total Funds for State and Local Health Departments and Other Public/Private Agencies was computed by dividing the state total from the CDC by the state population using the U.S. Census Bureau's July 2005 population estimate. Per capita immunization funds were computed by dividing the state total from the CDC by the under 18 population using the U.S. Census Bureau's July 2005 population estimate.

CDC Per Capita Ranking of Total Funds for State and Local Health Departments and Other Public/Private Agencies was computed based on per capita state funding.

HRSA Bioterrorism FY 2005 data are from a HHS press release, May 13, 2005. Available at <<http://www.hhs.gov/news/press/2005pres/20050513.html>>. These funds are awarded as cooperative agreements using a set base allocation and are then supplemented depending on population.

HRSA Bureau of Primary Health Care Community Health Center Program grants FY 2005 data were provided by HRSA's Bureau of Primary Health Care Community Health Center Program. State funding totals are based on sections 330(e), 330(g), 330(h), and 330(i) of the Public Health Services Act which covers community health center programs, migrant health centers and other

migrant health programs, the Health Care for the Homeless Program, and the Public Housing Primary Care Program.

HRSA Health Professions Grants FY2005 data were provided by the HRSA Bureau of Health Professions and the Association of American Medical Colleges. These funds help address shortages of medical and public health professionals in underserved communities, such as rural areas and inner cities, and also help in ensuring diversity in health care fields.³⁴

HRSA Maternal and Child Health (MCH) Block Grant FY 2005 data are from the Association of Maternal and Child Health Programs, available at <<http://www.amchp.org/legislative/lfiles/07%20State%20Table%20MCHBG.xls>>. The MCH block grant funds newborn screenings, lead poisoning screenings, public education campaigns, and services for children with special health care needs, as well as outreach to low-income pregnant women and children.³⁵

HRSA Ryan White Comprehensive AIDS Resources Emergency (CARE) Act Titles I & II FY 2005 data are from a HRSA Office of Communications press release, March 2, 2005. Available at <<http://www.hhs.gov/news/press/2005pres/20050302.html>>. The CARE Act provides funds to state and local programs to provide primary medical care, support services, training for health care providers, and technical assistance.³⁶

State Funding for Public Health FY 2004–2005 data are from publicly available state budget documents. Ranking of state public health spending was calculated by TFAH. See Appendix F for full explanation of state funding methodology.

Adult Health Indicators References

Adults with Asthma (2004) data are from the Behavioral Risk Factor Surveillance System, Prevalence Data 2004, percent responding “ever been told” they have asthma. National Center for Chronic Disease Prevention & Health Promotion, Centers for Disease Control and Prevention. Available at <<http://apps.nccd.cdc.gov/brfss/index.asp>>.

Adults with Diabetes (2004) data are from the Behavioral Risk Factor Surveillance System, Prevalence Data 2004, percent responding “ever been told” they have diabetes. National Center for Chronic Disease Prevention & Health Promotion, Centers for Disease Control and Prevention. Available at <<http://apps.nccd.cdc.gov/brfss/index.asp>>.

Obese Adults (2004) data are from the Behavioral Risk Factor Surveillance System, Prevalence Data 2004. National Center for Chronic Disease Prevention & Health Promotion, Centers for Disease Control and Prevention. Available at <<http://apps.nccd.cdc.gov/brfss/index.asp>>.

Estimated New Cancer Cases (2005) data are from the American Cancer Society (ACS). Cancer Facts and Figures 2005. Atlanta (GA): American Cancer Society; 2005. Available at <<http://www.cancer.org/downloads/STT/CAFF2005f4PWSecured.pdf>>.

Adults with Hypertension (2003) data are from the Behavioral Risk Factor Surveillance System, Prevalence Data 2003, percent responding “ever been told” they have high blood pressure. National Center for Chronic Disease Prevention & Health Promotion, Centers for Disease Control and Prevention. Available at <<http://apps.nccd.cdc.gov/brfss/index.asp>>.

Number of Human West Nile Cases (2005) data are from the Division of Vector-Borne Infectious Diseases, Centers for Disease Control and Prevention, ArboNET system. Total 2005 cases reported as of May, 2006. Available at <http://www.cdc.gov/ncidod/dvbid/west-nile/surv&controlCaseCount05_detailed.htm>.

Estimated Number of Persons Living with AIDS (2004 Year End) data are from Table 12, HIV/AIDS Surveillance Report 2005, Centers for Disease Control and Prevention. Available at <<http://www.statehealthfacts.org/cgi-bin/healthfacts.cgi?action=compare&welcome=1&category=HIV%2fAIDS>>.

Cumulative Number of AIDS Cases (2004 Year End) data are from Table 14, HIV/AIDS Surveillance Report 2005, Centers for Disease Control and Prevention. Available at <<http://www.statehealthfacts.org/cgi-bin/healthfacts.cgi?action=compare&welcome=1&category=HIV%2fAIDS>>.

Child Health Indicators References

Estimated Prevalence of Childhood Asthma (2003) data are from “Trends in Asthma Mortality and Morbidity,” American Lung Association, Epidemiology & Statistics Unit, Research and Program Services, May 2005. Available at <<http://www.kintera.org/atf/cf/%7B7A8D42C2-FCCA-4604-8ADE-7F5D5E762256%7D/ASTHMA1.PDF>>.

Overweight High School Students (2003) data are from the “Youth Risk Behavior Surveillance-United States, 2003,” Morbidity and Mortality Weekly Report: 53 (Atlanta, Georgia: Centers for Disease Control and Prevention, 21 May 2004): Number SS-2, Table 59. Available at <<http://www.cdc.gov/mmwr/preview/mmwrhtml/ss5302a1.htm>>.

Fully Immunized Children Aged 19 to 35 Months (2004) data are from “Table 2. Estimated vaccination coverage with 4:3:1, 4:3:1:3, 4:3:1:3:3, 4:3:1:3:3:1 series among children 19-35 months of age, by state and

state and selected urban area — National Immunization Survey, United States, 2003.” MMWR, July 29, 2005 / 54(29);717-721. Available at <<http://www.cdc.gov/mmwr/preview/mmwrhtml/mm5429a1.htm#tab2>>.

Infant Mortality Per 1,000 Live Births (2004) data are from “Births, Marriages, Divorces, and Deaths: Provisional Data for 2004” National Vital Statistics Reports; 53(21). National Center for Health Statistics, Hyattsville, Maryland: 2005. Tables A and 2. Available at <<http://www.cdc.gov/nchs/products/pubs/pubd/nvsr/nvsr.htm>>.

Low Birthweight Babies (2003) data are from “Births: Final Data for 2003.” National Vital Statistics Reports; 54(2). National Center for Health Statistics, Hyattsville, Maryland: 2005. Table 46. Available at <<http://www.cdc.gov/nchs/products/pubs/pubd/nvsr/nvsr.htm>>.

Other Public Health Indicators

Number of Primary Care Health Professions Shortage Areas (as of September 30, 2005) data are from the HRSA Bureau of Health Professions and the Association of American Medical Colleges.

Receipt of CDC Environmental Health Grant data are from the CDC National Center for Environmental Health. Available at <<http://www.cdc.gov/nceh/trackng/projects/home.htm>>.

2. Health professions programs were cut 51% for FY06, from \$300 million to \$147 million; cuts are not reflected in these FY05 data. 3. Multi-state grants were allocated to the state that is the home for the grant.

Appendix F:

STATE PUBLIC HEALTH FUNDING

Between June and September of 2005, TFAH conducted analyses of state public health budgets for fiscal years 2003-2004 and 2004-2005. For those states with biennium budgets, the 2001-2003 and 2003-2005 periods were used. Only the FY 2005 (or 2003-2005 biennium) is included in *Shortchanging America's Health 2006*.

Source documents include (1) publicly available executive budget documents that list actual expenditures, estimated expenditures, or final appropriations; (2) appropriations bills enacted by the state's legislature; (3) documents from legislative analysis offices; or (4) other budget documents from various state agencies.

In response to comments received regarding previous work, TFAH defines "public health" to broadly include all health spending with the exception of Medicaid, CHIP, and/or comparable health coverage programs for low-income residents. Mental health funds, services related to developmental disabilities or severely disabled persons, WIC funds, and/or state-sponsored pharmaceutical programs also were not included. In a few cases, state budget documents did not allow these programs — or similar human services — to be disaggregated; these exceptions are noted.

For most states, all state funding — regardless of general revenue or dedicated funds — was used. In some cases, only general revenue funds were used in order to separate out federal funds; these exceptions are also noted. Also, New York and Louisiana have been excluded because the state share of Medicaid, CHIP, and/or other social service programs could not be disaggregated, causing the per capita spending to be disproportionately higher. D.C. was excluded because its funds are disproportionately higher due to its unique budgeting systems.

Since each state allocates and reports its budget differently, comparisons among states are obviously difficult. This methodology may include or not include programs that a state may consider a public health function, but the methodology used was selected to maximize the ability to be consistent across states. Despite these differences, TFAH also computed per capita spending figures; total state spending was divided by the U.S. Census Bureau's July 2004 state population estimate. For those states with biennium budgets, half of the total was used in the calculation. These calculations are meant simply as an estimate of per-person state spending.

Endnotes

- 1 "Indicators for Chronic Disease Surveillance." *Morbidity and Mortality Weekly Report* 53: RR11 (September 10, 2004).
- 2 Note that this year's per capita average was computed differently from last year's [Shortchanging America's Health 2005](#) due to differences in the data received.
- 3 The estimate of 80 percent is based on conversations with Center for Disease Control and Prevention (CDC) officials.
- 4 Different officials at the Center for Disease Control and Prevention (CDC) prefer the use of "grants" and others "cooperative agreements" as terminology for the funds.
- 5 Based on a currently unpublished Trust for America's Health paper, "Public Health Leadership Initiative: An Action Plan for Healthy People in Health Communities in the 21st Century." The "Action Plan" has been signed onto by a range of public health experts, including Rachel Block, United Hospital Fund; Dr. Georges Benjamin, American Public Health Association; Dr. Jo Ivey Boufford, New York University Wagner; Shannon Brownlee, New America Foundation; Maureen Byrnes, Human Rights Fund (formerly with The Pew Charitable Trusts); Dr. Lawrence Deyton, Veterans Health Administration, U.S. Department of Veterans Affairs; Dr. Jonathan Fielding, Los Angeles County Department of Health Services; Dr. David Fleming, Bill & Melinda Gates Foundation; Dr. C. Earl Fox, University of Miami; Dr. Lawrence Gostin, Georgetown Law Center; Dr. Peggy Hamburg, NTI; Dr. James J. James, American Medical Association; Dr. James Marks, Robert Wood Johnson Foundation; Dr. Dennis O'Leary, Joint Commission on Accreditation of Healthcare Organizations; Dr. Alonzo Plough, The California Endowment; Dr. Kathleen Toomey, Emory University; Dr. Kenneth Warner, University of Michigan.
- 6 TFAH calculations based on state budget documents (see Appendix F for methodology). This analysis excludes New York and Louisiana. New York reports its budget in a way such that the share of the state's Medicaid, CHIP, and other social service programs cannot be separated from their public health budget. Louisiana reports its public health budget in a way that includes mental health, developmental disabilities, and/or addiction treatment in funding to local health departments.
- 7 The share of public health spending is from an analysis by U.S. Senator Bill Frist, MD, which appeared in the November/December 2002 of *Health Affairs*. The spending was compiled from the public health services that are included in the National Health Accounts (NHA), which is generated by the Centers for Medicare and Medicaid Services. The NHA does not include all programs that can be considered as related to public health such as environmental health, sanitation and water programs, and the Women, Infants, and Children Food Supplemental Program. Frist, Bill, MD, "Public Health & National Security: The Federal Role." *Health Affairs*, 21: 6 (November/December 2002).
- 8 See Appendix F for state public health budget methodology.
- 9 Based on a currently unpublished Trust for America's Health paper, "Public Health Leadership Initiative: An Action Plan for Healthy People in Health Communities in the 21st Century." The "Action Plan" has been signed onto by a range of public health experts, including Rachel Block, United Hospital Fund; Dr. Georges Benjamin, American Public Health Association; Dr. Jo Ivey Boufford, New York University Wagner; Shannon Brownlee, New America Foundation; Maureen Byrnes, Human Rights Fund (formerly with The Pew Charitable Trusts); Dr. Lawrence Deyton, Veterans Health Administration; Dr. Jonathan Fielding, Los Angeles County Department of Health Services; Dr. David Fleming, Bill & Melinda Gates Foundation; Dr. C. Earl Fox, University of Miami; Dr. Lawrence Gostin, Georgetown Law Center; Dr. Peggy Hamburg, NTI; Dr. James J. James, American Medical Association; Dr. James Marks, Robert Wood Johnson Foundation; Dr. Dennis O'Leary, Joint Commission on Accreditation of Healthcare Organizations; Dr. Alonzo Plough, The California Endowment; Dr. Kathleen Toomey, Emory University; Dr. Kenneth Warner, University of Michigan.
- 10 Note that New York and Louisiana were left out of this analysis because Medicaid funding, other services such as development disabilities, or federal dollars could not be disaggregated from the total. See appendix F for more detail on state public health budget methodology.
- 11 From "Financing Local Public Health in Washington State: Challenges and Choices," conducted as part of Washington's Public Health Improvement Partnership. The report concludes that an investment of \$400 million dollars is needed "for all health jurisdictions [in the state] to achieve 95 [percent] performance according to the Washington Public Health Standards." TFAH did not include personal health care and divided the new total (\$360 million) by Washington's population, resulting in a figure of \$60 per Washington resident. Extrapolating this to the entire nation (multiplying \$60 dollars by 300 million people) suggests an investment of about \$18 billion.
- 12 A 2001 Bergen County, New Jersey study estimated that applying their per capita spending of \$6.61 per resident would extrapolate to about \$1.9 billion of local jurisdiction expenditures.
