CRS Report for Congress

Prepared for Members and Committees of Congress

Summary

In 2003 and 2004, the U.S. Commission on Ocean Policy and the Pew Oceans Commission made numerous recommendations for changing U.S. ocean policy and management. The 109th Congress reauthorized the Magnuson-Stevens Fishery Conservation and Management Act (P.L. 109-479), incorporating provisions recommended by both commissions, and authorized the Marine Debris Research, Prevention, and Reduction Act (P.L. 109-449). Several bills encompassing a broad array of cross-cutting concerns such as ocean exploration; ocean and coastal observing systems; federal organization and administrative structure; and ocean and coastal mapping were considered, but not acted on during the 110th Congress.

Identification of the need for a comprehensive national ocean policy can be traced back to 1966, when a presidential Commission on Marine Science, Engineering, and Resources was established (called the Stratton Commission). In 1969, the commission provided recommendations that led to reorganizing federal ocean programs and establishing the National Oceanic and Atmospheric Administration (NOAA). By the late 1980s, a number of influential voices had concluded that U.S. ocean management remained fragmented and was characterized by a confusing array of laws, regulations, and practices. After repeated attempts, the 106th Congress enacted legislation to establish a U.S. Commission on Ocean Policy (P.L. 106-256). Earlier in 2000, the Pew Oceans Commission, an independent group, was established by the Pew Charitable Trusts to conduct a national dialogue on restoring and protecting living marine resources in U.S. waters.

In June 2003, the Pew Commission released its final report, *America's Living Oceans: Charting a Course for Sea Change*, outlining a national agenda for protecting and restoring the oceans. In September 2004, the U.S. Commission published, *An Ocean Blueprint for the 21st Century*, its final report with 212 recommendations on a coordinated and comprehensive national ocean policy. On December 17, 2004, the Bush Administration submitted to Congress the *U.S. Ocean Action Plan*, its formal response to the recommendations of the U.S. Commission on Ocean Policy. The U.S. Commission on Ocean Policy and the Pew Oceans Commission established the Joint Ocean Commission Initiative in early 2005 to collaborate on a number of key recommendations of both reports. The Joint Ocean Commission has remained active in advancing these recommendations to Congress and the Administration.

In June 2009, the Obama Administration established an Ocean Policy Task Force to develop a national ocean policy. On September 10, 2009, the task force released the *Interim Report of the Interagency Ocean Policy Task Force*, which includes national ocean policy priorities, a governance structure for interagency coordination, and an implementation strategy. On December 9, 2009, the task force released the *Interim Framework for Effective Coastal and Marine Spatial Planning*, which recommends a regional approach to marine spatial planning.

The 111th Congress is continuing to consider ocean policy and management recommendations of the two commission reports. Comprehensive changes in ocean governance and administrative structure are proposed in the Oceans Conservation, Education, and National Strategy for the 21st Century Act (H.R. 21) and the National Oceans Protection Act of 2009 (S. 858). However, most congressional activity has focused on specific topics. Title XII of the Omnibus Public Land Management Act of 2009 (P.L. 111-11) included subtitles that address ocean exploration, ocean and coastal mapping, ocean and coastal integrated observation, ocean acidification research and monitoring, and coastal and estuarine land conservation.

Background and Analysis

The U.S. Commission on Ocean Policy and the Pew Oceans Commission have made numerous recommendations for changing U.S. ocean policy and management. To address the findings and recommendations of the ocean commissions and the President's response, Congress may consider comprehensive bills encompassing a broad array of cross-cutting concerns, including federal organization and administrative structure, regional approaches to ecosystem management, and funding strategies. On the other hand, Congress may continue to act on specific issues, as it has for fisheries, ocean exploration, ocean mapping, marine debris, ocean acidification, and others.

Congress has shown interest in ocean affairs in recent decades, examining components of the federal ocean programs, enacting legislation creating new ocean programs, and taking steps to define a national ocean policy. The Marine Resources and Engineering Development Act of 1966 (P.L. 89-454) established a National Council on Marine Resources and Engineering Development in the White House and initiated work by a presidential bipartisan Commission on Marine Science, Engineering, and Resources. Dr. Julius Stratton, then recently retired president of the Massachusetts Institute of Technology and, at the time, Chairman of the Board of the Ford Foundation, was appointed commission chairman by President Lyndon Johnson. The commission, composed of 15 members, was often referred to as the Stratton Commission. In 1969, the commission completed its final report, *Our Nation and the Sea: A Plan for National Action*, and its more than 120 formal recommendations provided what many considered to be the most comprehensive statement of federal policy for exploration and development of ocean resources. The study was instrumental in defining the structure, if not all the substance, of what a national ocean policy could or should look like. Furthermore, new ocean-oriented programs were initiated and existing ones were strengthened in the years following the commission's report, through a number of laws enacted by Congress.

Recommendations of the Stratton Commission led directly, within the following decade, to forming the National Sea Grant College Program, to creating the National Advisory Committee on Oceans and Atmosphere (NACOA), and to reorganizing federal ocean programs under the newly established National Oceanic and Atmospheric Administration (NOAA). Subsequent legislation on estuarine reserves, national marine sanctuaries, marine mammal protection, coastal zone management, fishery conservation and management, ocean pollution, and seabed mining also reflected commission recommendations. Efforts sprang up within the federal government and among various interagency and federal advisory committees to flesh out how best to implement a truly comprehensive and forward-looking national ocean policy, most notably articulated in the 1978 Department of Commerce report *U.S. Ocean Policy in the 1970s: Status and Issues*.¹

Since 1980, with concerns about limiting federal expenditures and streamlining government, there have been fewer ocean initiatives, and a number of ocean programs, particularly those of NOAA, have been consolidated and reduced. However, the programs begun in the 1970s generally have been reauthorized and have matured. By the late 1980s, there appeared to be a broad consensus among those conversant in ocean affairs that a need existed to redefine or, at the very least, better define national ocean policy. Two stimuli for this renewed interest were the 1983 proclamation by President Reagan establishing a 200-nautical-mile U.S. Exclusive Economic Zone (EEZ) and the 1988 extension of the U.S. territorial sea from 3 to 12 nautical miles, both of

¹ U.S. Dept. of Commerce, *U.S. Ocean Policy in the 1970s: Status and Issues* (Washington, DC: GPO, 1978), 334 pp.

which came in the aftermath of the President's decision that the United States would not sign the U.N. Convention on the Law of the Sea.²

Legislation creating an oceans commission and/or a national ocean council to review U.S. ocean policy was introduced and hearings were held in the 98th, 99th, 100th, and 105th Congresses. Legislation did pass the House in October 1983, September 1987, and again in October 1988, but was not acted on by the Senate in any of those instances. In the 105th Congress, legislation creating both a national ocean council and a commission on ocean policy passed the Senate in November 1997, and in 1998 the House passed a bill creating a commission on ocean policy. However, Congress adjourned in 1998 before differences between these two measures could be reconciled. It was not until the 106th Congress in 2000 that legislation was enacted to establish a 16-member U.S. Commission on Ocean Policy (P.L. 106-256). The commission's charge was to make recommendations for a coordinated and comprehensive national ocean policy for a broad range of ocean issues. The enactment rode a crest of interest generated largely by a National Ocean Conference convened by the White House in June 1998, in Monterey, CA,³ and attended by President Clinton and Vice President Gore, against a background of media and public attention surrounding the declaration by the United Nations of 1998 as the International Year of the Ocean.⁴ Momentum was added by the September 1999 release of a post-Monterey conference report, ordered by the President and prepared by members of his Cabinet, entitled *Turning to the Sea: America's Ocean Future*, in which recommendations were offered for a coordinated, disciplined, long-term federal ocean policy.⁵

Also in 2000, partially in response to that rekindled interest and partially in response to congressional legislation having failed final passage in 1998, the Pew Charitable Trusts established the Pew Oceans Commission, an independent group of 18 American experts in their respective fields. The Pew Commission's charge was to conduct a national dialogue on the policies needed to restore and protect living marine resources in U.S. waters. Pew proceeded with their effort after failing to persuade key Members of Congress to introduce legislation to establish a public/private, nongovernmental oceans commission.

U.S. Commission on Ocean Policy

The Oceans Act of 2000 (P.L. 106-256) mandated a U.S. Commission on Ocean Policy. Appointed by the President, the commission was required to issue findings and make recommendations to the President and Congress for a coordinated and comprehensive national ocean policy. The new policy was to address a broad range of issues, from the stewardship of marine resources and pollution prevention to enhancement and support of marine science, commerce, and transportation.

² For more information, see CRS Report RS21890, *The U.N. Law of the Sea Convention and the United States: Developments Since October 2003*, by Marjorie Ann Browne.

³ U.S. Dept. of Commerce and Dept. of the Navy, *Oceans of Commerce ... Oceans of Life*, Proceedings of the National Ocean Conference, June 11-12, 1998, Monterey, CA (Washington, DC: NOAA, 1998), vi + 241 pp.

⁴ The International Year of the Ocean was proclaimed by the U.N. General Assembly on December 19, 1994, in resolution A/RES/49/131, *Question of Declaring 1998 International Year of the Ocean*, at the initiative of the Intergovernmental Oceanographic Commission (IOC) of the U.N. Educational, Scientific and Cultural Organization (UNESCO).

⁵ U.S. Dept. of Commerce and Dept. of the Navy, *Turning to the Sea: America's Ocean Future* (Washington, DC: NOAA, 1999), 64 p.

The 16 members of the commission were appointed by President Bush on July 3, 2001. Those appointments were based on a process that included nominations by Congress and appointment by the President.

The commission convened its inaugural meeting on September 17-18, 2001, in Washington, DC, and commissioners selected Admiral James D. Watkins, U.S. Navy (retired) as chair. Through several sessions, the commission established four working groups to address issues in the areas of (1) governance; (2) research, education, and marine operations; (3) stewardship; and (4) investment and implementation. The working groups were charged with reviewing and analyzing issues within their specific areas of focus and reporting their findings to the full commission.

The Oceans Act of 2000 specifically directed the commission to establish a Science Advisory Panel to assist in preparing the report and to ensure that the scientific information considered by the commission and each of its working groups was the best available. The composition of the Science Advisory Panel was determined by the commissioners; members were recruited in consultation with the Ocean Studies Board of the National Research Council at the National Academy of Sciences and reflected the breadth of issues before the commission. The commission divided the members of the Science Advisory Panel into four working groups, consistent with the full commission's structure.

The commission began its work by launching a series of public meetings to gather information about the most pressing issues that the Nation faced regarding the use and stewardship of the oceans. The working groups played an important role in determining the effectiveness of the regional public meetings and in identifying key issues to be addressed by the commission. In each region visited, the commission heard presentations on a wide-ranging set of topics judged to be necessary to ultimately address the requirements in the Oceans Act of 2000. Based on the information gathered at the public meetings, the working groups identified and reviewed key issues, outlined options for addressing those issues, and determined the need for white papers providing more detailed information on specific topics. The deliberations of each working group were shared with the other groups throughout the process to better coordinate development of the final commission report and recommendations.

After hearing 440 presenters at 15 public meetings in 10 cities during 11 months and conducting 17 additional site visits around the country, the commission completed its information-gathering phase in October 2002. The commission began deliberations in November 2002, and the last meeting dedicated to open public discussion of policy options—the sixteenth public commission meeting—was held April 2-3, 2003, in Washington, DC.

Reports and Working Documents

Examples of supporting documents, working papers, and publications either produced for or generated by the commission include *Draft Policy Option Documents*, *Working Table of Contents*, *Governing the Oceans*, *Elements Document*, and *Law of the Sea Resolution*. These documents are available in pdf format on the commission's website at <http://www.oceancommission.gov/documents/welcome.html>.

Delivery of the Commission Report

The commission published its final report in two stages. First, on April 20, 2004, the commission released a *Preliminary Report*, which was available for a 30-day period of review and comment by the nation's governors and interested stakeholders.⁶ That *Preliminary Report* was built on information presented at the public meetings and site visits, combined with scientific and technical information on oceans and coasts from hundreds of experts. The findings and policy recommendations in the *Preliminary Report* reflected a consensus of commission members and presented what the commissioners believed to be a balanced approach to protecting the ocean environment while sustaining the vital role oceans and coasts play in the national economy.⁷

After the public comment period closed, stage two of the process commenced when the commission began reviewing the comments and modifying the preliminary report in response to gubernatorial or other stakeholder input. At its 17th public meeting on July 22, 2004, the U.S. Commission on Ocean Policy approved changes to its *Preliminary Report* and directed staff to prepare the final report, bearing the official title *An Ocean Blueprint for the 21st Century*. That report, with its recommendations on a coordinated and comprehensive national ocean policy, was delivered to the President and Congress on September 20, 2004, in ceremonies at the White House and on Capitol Hill.

Summary of Commission Recommendations

The commission presented 212 recommendations throughout *An Ocean Blueprint*; of these recommendations, 13 “critical” actions recommended by the commission can be summarized as follows:

1. Establish a National Ocean Council in the Executive Office of the President, chaired by an Assistant to the President.
2. Create a President's Council of Advisors on Ocean Policy.
3. Strengthen NOAA and improve the federal agency structure.
4. Develop a flexible and voluntary process for creating regional ocean councils, facilitated and supported by the National Ocean Council.
5. Double the nation's investment in ocean research.
6. Implement the national Integrated Ocean Observing System.⁸

⁶ On May 14, 2004, the commission extended the closing date for public comment on the *Preliminary Report* to June 4, 2004. This extension applied to governors and all other stakeholders.

⁷ The U.S. Commission on Ocean Policy's preliminary report, *Preliminary Report of the U.S. Commission on Ocean Policy*, is available at <http://oceancommission.gov/documents/prelimreport/welcome.html>.

⁸ An integrated system could provide (1) raw data on oceanographic parameters, with data assembled and checked for quality; (2) data management and communications involving a system of standards and protocols to allow a wide variety of data to be located, integrated, and archived; and (3) data analysis and incorporation into models of environmental behavior.

7. Increase attention to ocean education through coordinated and effective formal and informal programs.
8. Strengthen the link between coastal and watershed management.
9. Create a coordinated management regime for federal waters.
10. Create measurable water pollution reduction goals, particularly for nonpoint sources, and strengthen incentives, technical assistance, and other management tools to reach those goals.
11. Reform fisheries management by separating assessment and allocation, improving the Regional Fishery Management Council system, and exploring the use of dedicated access privileges.
12. Accede to the U.N. Convention on the Law of the Sea.
13. Establish an Ocean Policy Trust Fund based on revenue from offshore oil and gas development and other new and emerging offshore uses to pay for implementing the recommendations.

Changes Contained in the Final Report

At its meeting on July 22, 2004, the commission unanimously approved numerous changes to the recommendations and text in the commission's *Preliminary Report*, which were included in the final report, *An Ocean Blueprint*. Those modifications were based on more than 600 pages of comments from 37 governors and 5 tribal leaders; responses from more than 800 public commenters, stakeholders, and other experts and advisers; as well as technical corrections provided by federal agencies. There were, however, no changes to the 13 critical actions listed above. A detailed summary of specific changes appearing in *An Ocean Blueprint* is available on the commission's website.⁹ Changes of an overall general nature in the final report include the following:

- The report was revised to further emphasize the important role of states, and to clarify that the commission favors a balanced, not a "top down," approach of shared responsibility for ocean and coastal issues;
- The report clarified the commission's intent to embrace all coastal areas and decision-makers, including the Great Lakes, U.S. territories, and tribes;
- Many sections of the report were revised to address the issue of climate change and its impacts on the oceans and coasts;
- The importance of cultural heritage in connection with the ocean was more fully recognized and addressed; and
- Discussions about the funding needed to implement recommendations were consolidated into an expanded Chapter 30 ("Funding Needs and Possible Sources").

⁹ http://www.oceancommission.gov/documents/prelim_report_changes.pdf.

Comments on the U.S. Commission's Work

The governors' and tribal leaders' comments on the commission's *Preliminary Report* were generally favorable. Most of the 37 governors and 5 tribal leaders highlighted the report's comprehensive treatment of ocean and coastal issues, the economic importance of oceans and coasts, and the need to take immediate action to protect and enhance the health of these resources. Their primary concerns related to funding issues; the participation of states, territories, and tribes in national policy development; and the need for flexibility in the implementation of such policies.¹⁰

Public comments were received from private citizens (including school children), non-governmental organizations, trade associations, governmental and quasi-governmental organizations (e.g., regional fishery management councils), academicians, scientists, and lawyers. The vast majority of public commenters praised the report as comprehensive and balanced, and voiced their support for implementation of the recommendations. Although many supported the report's major themes and recommendations, a significant number of commenters highlighted areas of particular concern, including national and regional governance, federal organization, offshore management regimes, funding for science and research and for implementation of commission recommendations, ecosystem-based management, regulation and enforcement, and living marine resources. Furthermore, there were numerous additional comments on a suite of issues, including cruise ships, climate change, atmospheric deposition, invasive species, bottom-trawling, bycatch, wind energy, coastal development, international ocean policy, and seafood safety.¹¹

Soon after the release of the commission's preliminary report, several Members of Congress commented on the report and its recommendations. These members generally supported the basic thrust of the report, but specific issues such as the level of proposed funding increases, creation of a specific oceans structure in the White House, and the transfer of other agencies' functions to NOAA were questioned.¹² Articles and editorials in regional media generally focused on selected local issues,¹³ while interest groups highlighted specific issues. Some states made their comments publically available.¹⁴ Some commenters criticized the report and its recommendations as further contributing to excessive government control.¹⁵

¹⁰ A summary of comments submitted by the governors and tribal leaders on the *Preliminary Report* is available on the commission's website, at http://www.oceancommission.gov/newsnotices/summary_govcomments.pdf. The full text of their comments is also available online at http://www.oceancommission.gov/documents/gov_comments/welcome.html.

¹¹ A two-page summary of the public comments is available on the commission's website at http://www.oceancommission.gov/newsnotices/summary_publiccomments.pdf.

¹⁵ For example, see <http://worldwildlife.org/oceans/report.cfm>.

The Pew Oceans Commission

The Pew Oceans Commission, an independent group of 18 authorities in ocean-related issues and government, was established in April 2000 and funded by a \$5.5 million grant from the Pew Charitable Trusts to conduct a national dialogue on the policies needed to restore and protect living marine resources in U.S. waters. This commission released its final report, *America's Living Oceans: Charting a Course for Sea Change*, on June 4, 2003, outlining a national agenda for protecting and restoring the oceans.¹⁶ In addition, during this process, nine "science reports" were prepared and released.¹⁷

Summary of Pew Commission Recommendations

The commission's 26 recommendations, organized within six categories, are summarized in the final report as follows:

A. Governance for Sustainable Seas

1. Enact a National Ocean Policy Act to protect, maintain, and restore the health, integrity, resilience, and productivity of the ocean.
2. Establish regional ocean ecosystem councils to develop and implement enforceable regional ocean governance plans.
3. Establish a national system of fully protected marine reserves.
4. Establish an independent national oceans agency.
5. Establish a permanent federal interagency oceans council.

B. Restoring America's Fisheries

6. Redefine the principal objective of American marine fishery policy to protect marine ecosystems.
7. Separate conservation and allocation decisions.
8. Implement ecosystem-based planning and marine zoning.
9. Regulate the use of fishing gear that is destructive to marine habitats.
10. Require bycatch monitoring and management plans as a condition of fishing.

¹⁶ The full report is available at http://www.pewtrusts.org/our_work_detail.aspx?id=130.

¹⁷ The topics of the nine science reports were (1) *Managing Marine Fisheries in the United States*; (2) *A Dialogue on America's Fisheries*; (3) *Socioeconomic Perspectives on Marine Fisheries in the United States*; (4) *Marine Reserves: A Tool for Ecosystem Management and Conservation*; (5) *Ecological Effects of Fishing in Marine Ecosystems of the United States*; (6) *Coastal Sprawl and the Effect of Urban Design on Aquatic Ecosystems in the United States*; (7) *Marine Pollution in the United States*; (8) *Marine Aquaculture in the United States*; and (9) *Introduced Species In U.S. Coastal Waters*. Copies of these reports are available at http://www.pewtrusts.org/our_work_detail.aspx?id=130.

11. Require comprehensive access and allocation planning as a condition of fishing.

12. Establish a permanent fishery conservation and management trust fund.

C. Preserving Our Coasts

13. Develop an action plan to address non-point source pollution and protect water quality on a watershed basis.

14. Identify and protect from development habitat critical for the functioning of coastal ecosystems.

15. Institute effective mechanisms at all levels of government to manage development and minimize its impact on coastal ecosystems.

16. Redirect government programs and subsidies away from harmful coastal development and toward beneficial activities, including restoration.

D. Cleaning Coastal Waters

17. Revise, strengthen, and expand pollution laws to focus on non-point source pollution.

18. Address unabated point sources of pollution, such as concentrated animal feeding operations and cruise ships.

19. Create a flexible framework to address emerging and nontraditional sources of pollution, such as invasive species and noise.

20. Strengthen control over toxic pollution.

E. Guiding Sustainable Marine Aquaculture

21. Implement a new national marine aquaculture policy based on sound conservation principles and standards.

22. Set a standard, and provide international leadership, for ecologically sound marine aquaculture practices.

F. Science, Education, and Funding

23. Develop and implement a comprehensive national ocean research and monitoring strategy.

24. Double funding for basic ocean science and research.

25. Improve the use of existing scientific information by creating a mechanism or institution that regularly provides independent scientific oversight of ocean and coastal management.

26. Broaden ocean education and awareness through a commitment to teach and learn about the world ocean, at all levels of society.

Comments on the Pew Commission's Work

Comments on the commission's work ranged from dismissive to laudatory. Some were concerned that the commission's work was not objective, being overly influenced by the "environmental agenda" of the Pew Charitable Trusts. They perceived the report as an attack on commercial seafood harvesting that ignored other significant issues such as the damaging effects of oil spills in the marine environment.¹⁸ Representative Richard Pombo, then Chair of the House Committee on Resources, issued a press release on June 4, 2003, critical of the Pew Commission report, concluding "we cannot expect such a group to issue non-biased recommendations." Praise for the report came from commission members, who saw the report as a long overdue update of antiquated U.S. ocean policy, offering practical solutions to reverse declining trends.¹⁹ John Flicker, the President of the Audubon Society, referred to this report as a wake-up call to all Americans that the oceans and coastal areas are in real trouble, offering a blueprint for action to protect ecosystems at risk.²⁰ The Pew Commission report covered only a portion of ocean issues with concentration on the environment, compared with the U.S. Commission on Ocean Policy, which covered a broader cross-section of issues.

Beyond the House Resources Committee press release, Congress did not immediately react to the release of the Pew Oceans Commission report. Pew commissioners, including Chairman Leon E. Panetta, testified before the U.S. Commission on several occasions.

Administration Response and Implementation

Bush Administration

Within 120 days after receiving the U.S. Ocean Commission's report, the President was required to submit to Congress a statement of proposals to implement or respond to the commission's recommendations for a national policy on ocean and coastal resources.²¹ In doing so, the President was directed to consult with state and local governments and non-federal organizations and individuals involved in ocean and coastal activities.²²

On December 17, 2004, President Bush submitted to Congress a *U.S. Ocean Action Plan*, his formal response to the recommendations of the U.S. Commission. Also on December 17, the President signed Executive Order 13366 establishing, as part of the Council on Environmental Quality, a Committee on Ocean Policy, to be led by the chair of the Council on Environmental Quality. On January 26, 2007, the Committee on Ocean Policy released the *U.S. Ocean Action Plan Implementation Update*. The original action plan and the update covered progress in six general subject areas:

- enhancing ocean leadership and coordination;
- advancing our understanding of the oceans, coasts, and Great Lakes;

¹⁸ Nils E. Stolpe, *The Pew Commission—A Basis for National Ocean Policy?*, available at <http://www.fishingnj.org/netusa23.htm>.

¹⁹ Pat White and Jane Lubchenco, "New Policies on Ocean Fishing Overdue," *The Boston Globe*, June 5, 2003, p. A19.

²⁰ John Flicker, "Save the Coasts, Even if Only for Our Sake," *Sun Sentinel*, June 19, 2003, p. 25A.

²¹ P.L. 106-256, § 4(a).

²² P.L. 106-256, § 4(b).

- enhancing the use and conservation of ocean, coastal, and Great Lakes resources;
- managing coasts and their watersheds;
- supporting marine transportation; and
- advancing international ocean policy and science.

To support this effort, the Committee on Ocean Policy established an ocean governance structure composed of subsidiary bodies to coordinate existing management: the Interagency Committee on Ocean Science and Resource Management Integration (ICOSRMI) and two subcommittees, established by the National Science and Technology Council (NSTC), the Joint Subcommittee on Ocean Science and Technology (JSOST) and the Subcommittee on Integrated Management of Ocean Resources (SIMOR). In January 2008, the ICOSRMI released the *Federal Ocean and Coastal Activities Report to Congress for CY 2006 and 2007*. The report provides an overview of select activities and accomplishments of Ocean Action Plan implementation.

Obama Administration

On June 12, 2009, President Obama issued a memorandum to the heads of executive departments and agencies to establish an Interagency Ocean Policy Task Force (IOPTF). The IOPTF is composed of senior policy-level officials from executive departments, agencies, and offices represented on the Committee on Ocean Policy and is led by the chair of the Council on Environmental Quality (CEQ). The IOPTF was charged with developing recommendations for a national ocean policy and a framework for coastal and marine spatial planning.

On July 19, 2010, the CEQ released the *Final Recommendations of the Ocean Policy Task Force*.²³ The recommendations are divided into four main sections that focus on the following areas:

- a national policy for the ocean, the coasts, and the Great Lakes;
- a governance structure to provide sustained, high-level, and coordinated attention to ocean, coastal, and Great Lakes issues;
- a targeted implementation strategy that identifies and prioritizes nine categories for action; and
- a framework for coastal and marine spatial planning.

The IOPTF identified three general policy areas:

- healthy and resilient ocean, coasts, and Great Lakes;
- safe and productive ocean, coasts, and Great Lakes; and
- understood and treasured ocean, coasts, and Great Lakes.

The policies would be guided by nine stewardship principles outlined in the framework. Departments and agencies are instructed to identify budgetary, administrative, regulatory, and legislative requirements to implement these elements.

²³ See <http://www.whitehouse.gov/administration/eop/oceans>.

The coordination framework and participating agencies would be similar to the committees established under the Bush Administration. The National Ocean Council (NOC) would assume overall responsibility for implementing the national ocean policy. The NOC would be co-chaired by the chair of CEQ and the director of the Office of Science and Technology Policy. The Ocean Resource Management Interagency Policy Committee (ORM-IPC) is the successor to the current SIMOR, and the National Science and Technology Council's JSOST would serve as the Ocean Science and Technology Interagency Policy Committee (OST-IPC). The ORM-IPC would function as the ocean resource management body of the NOC with emphasis on implementing the national policy and priorities defined by the NOC. The OST-IPC would function as the ocean science and technology body of the NOC. The governance structure would also include a steering committee, a governance advisory committee, and an ocean research and resources advisory panel.

The third section of the recommendations covers the implementation strategy and proposed national priority objectives. The IOPTF identified four basic areas related to “how we do business” as ways in which the federal government must operate differently to improve stewardship of the ocean, coastal areas, and the Great Lakes. These areas include:

- ecosystem-based management;
- coastal and marine spatial planning;
- informed decisions and improved understanding; and
- coordination and support.

The implementation strategy also includes five areas of special emphasis which represent substantive areas of importance to achieving the national policy. These areas include:

- resiliency and adaptation to climate change and ocean acidification;
- regional ecosystem protection and restoration;
- water quality and sustainable practices on land;
- changing conditions in the Arctic; and
- ocean, coastal, and Great Lakes observations and infrastructure.

The final main section is the Framework for Effective Coastal and Marine Spatial Planning. The framework defines coastal and marine spatial planning (CMSP) as a comprehensive, adaptive, integrated, ecosystem-based, and transparent spatial planning process based on sound science, for analyzing current and anticipated uses of ocean, coastal, and Great Lakes areas. The framework also provides national CMSP goals and guiding principles, and describes development and implementation of CMSP.

On July 19, President Obama also signed an executive order to establish a national policy for stewardship of the oceans, the coasts, and the Great Lakes.²⁴ The executive order adopts the recommendations of the IOPTF to establish a National Ocean Council and provides for the development of coastal and marine spatial plans. This executive order revokes E.O. 13366, signed

²⁴ See <http://www.whitehouse.gov/administration/eop/oceans/whats-new>.

by President Bush in 2004. The National Ocean Council plans to hold its first meeting later this summer to begin implementing the national policy.

United National Convention on the Law of the Sea

The United Nations Convention on the Law of the Sea (UNCLOS) was agreed to in 1982, but the United States never became a signatory nation. On May 15, 2007, President Bush issued a statement in which he “urged the Senate to act favorably on U.S. accession to UNCLOS during this session [110th] of Congress.” UNCLOS was reported on December 19, 2007, by the Senate Committee on Foreign Relations (S.Exec.Rept. 110-9), but the Senate did not consider the treaty.²⁵ In the 111th Congress, Secretary of State Hillary Clinton, at her confirmation hearing before the Senate Committee on Foreign Affairs on January 13, 2009, acknowledged that U.S. accession to the LOS Convention would be an Obama Administration priority. The final recommendations of the IOPTF included unanimous support for U.S. accession to UNCLOS.

Joint Ocean Commission Initiative

The U.S. Commission on Ocean Policy and the Pew Oceans Commission identified complementary recommendations for a number of key areas in their respective reports. A collaborative Joint Ocean Commission Initiative was initiated in early 2005 to maintain the momentum generated by the two commissions. This initiative is guided by a ten-member task force, five of whom served on each commission, and is led by former commission chairs Admiral James D. Watkins and the Honorable Leon E. Panetta. The main objective of the initiative is to maintain progress on ocean policy reform with core priorities that include the need for ecosystem management, ocean governance reforms, improved fisheries management, increased reliance on science in management decisions, and more funding for ocean and coastal programs.

On March 16, 2006, a bipartisan group of 10 Senators requested that the Joint Ocean Commission Initiative report on the top 10 steps Congress should take to address the most pressing challenges, the highest funding priorities, and the most important changes to federal laws and the budget process to establish a more effective and integrated ocean policy. In response on June 13, 2006, a national ocean policy action plan for Congress, *From Sea to Shining Sea: Priorities for Ocean Policy Reform—A Report to the United States Senate*, was delivered to Congress by the Joint Ocean Commission Initiative and was intended to serve as a guide for developing legislation and funding high-priority programs.²⁶

This action plan responded to the Senators’ request to identify the most urgent priorities for congressional action to protect, restore, and maintain the marine ecosystem. According to the plan, the 10 steps are:

- adopt a statement of national ocean policy;

²⁵ For more information, see CRS Report RS21890, *The U.N. Law of the Sea Convention and the United States: Developments Since October 2003*, by Marjorie Ann Browne.

²⁶ The full action plan is available at http://www.jointoceancommission.org/resource-center/1-Reports/2006-06-13_Sea_to_Shining_Sea_Report_to_Senate.pdf.

- pass an organic act to establish NOAA in law and work with the Administration to identify and act upon opportunities to improve federal agency coordination on ocean and coastal issues;
- foster ecosystem-based regional governance;
- reauthorize an improved Magnuson-Stevens Fishery Conservation and Management Act;
- enact legislation to support innovation and competition in ocean-related research and education consistent with key initiatives in the Bush Administration's Ocean Research Priorities Plan and Implementation Strategy (discussed in the following section on "Administration Response and Implementation");
- enact legislation to authorize and fund the Integrated Ocean Observing System (IOOS);
- accede to the U.N. Convention on the Law of the Sea;
- establish an Ocean Trust Fund in the U.S. Treasury as a dedicated source of funds for improved management and understanding of ocean and coastal resources by federal and state governments;
- increase base funding for core ocean and coastal programs and direct development of an integrated ocean budget; and
- enact ocean and coastal legislation that progressed significantly in the 109th Congress.

The Joint Ocean Commission Initiative remains active in promoting ocean policy reform through reports, press releases, letters to and testimony before Congress, and public speaking engagements. In April 2009, it released its most recent report, titled *Changing Oceans, Changing World: Ocean Priorities for the Obama Administration and Congress*. The Joint Ocean Commission has expressed support and provided comments for the two IOPTF reports. Additional information about the Joint Ocean Commission Initiative may be found at <http://www.jointoceancommission.org/>.

Issues for Congress

The 111th Congress will continue to consider whether and how to respond to the findings and recommendations of the Pew Oceans Commission report, *America's Living Oceans: Charting a Course for Sea Change*, and the report of the U.S. Commission on Ocean Policy, *An Ocean Blueprint for the 21st Century*. Over five years after the release of the U.S. Commission on Ocean Policy's report and more than six years after the release of the Pew Oceans Commission report, some progress on ocean policy reform has been made. However, hundreds of recommendations suggested by the two commissions have not been addressed.

Legislation

The 109th Congress reauthorized the Magnuson-Stevens Fishery Conservation and Management Act (MSFCMA) (P.L. 109-479), incorporating provisions reflecting many recommendations made by both commissions. These provisions address a broad array of topics, including dedicated

access privileges, overfishing, and fish stock rebuilding as well as issues of concern to specific fisheries and regions. After its passage, the Joint Ocean Commission Initiative highlighted provisions related to enhancing the role of science, establishing sustainable harvest levels, authorizing the use of market-based approaches, and setting a clear deadline for ending overfishing. The Administration also emphasized provisions authorizing market-based limited access privilege programs, as well as language strengthening fisheries enforcement, developing ecosystem pilot programs, establishing community-based restoration programs, and creating a regionally-based registry for recreational fishermen.

The 109th Congress also considered bills on specific ocean topics, including ocean exploration; ocean and coastal observing systems; marine debris research, prevention, and reduction; and ocean and coastal mapping integration. Related issues considered whether to (1) provide additional funds for ocean-related research; (2) replace a fragmented administrative structure with a more coherent federal organization; or (3) adopt new approaches for managing marine resources, such as setting aside large reserves from some or all uses. Only one bill was enacted, the Marine Debris Research, Prevention, and Reduction Act (P.L. 109-449). This legislation established a program within NOAA and the U.S. Coast Guard to help identify, determine sources of, assess, reduce, and prevent marine debris and its damage to the marine environment and navigation safety, in coordination with non-federal entities.

A variety of legislation has been introduced during the 111th Congress and bills related to specific topics have been enacted. The Omnibus Public Land Management Act of 2009 (P.L. 111-11) included several ocean-related bills that were considered during previous Congresses. Title XII includes sections that address ocean exploration, ocean and coastal mapping, ocean and coastal integrated observation, ocean acidification research and monitoring, and coastal and estuarine land conservation.

Early in the 111th Congress, H.R. 21, the Oceans, Conservation, Education, and National Strategy for the 21st Century Act, and a similar bill, S. 858, the National Oceans Protection Act of 2009, were introduced. H.R. 21, first introduced in the 108th Congress, would implement many recommendations of the Pew and U.S. Commission reports, by establishing a comprehensive national ocean policy for the management of U.S. coasts, oceans, and Great Lakes. The legislation would:

- establish a national ocean policy with emphasis on conservation of marine ecosystems;
- authorize NOAA;
- strengthen and formalize regional coordination by promoting a regional governance structure; and
- create an Ocean and Great Lakes Trust Fund.

On June 18, 2009, the House Natural Resources Subcommittee in Insular Affairs, Oceans, and Wildlife held a hearing on H.R. 21.²⁷ Supporters of these bills have pointed to the need to improve ocean conservation because of damage to marine ecosystems caused by pollution,

²⁷ U.S. Congress, House Committee on Natural Resources, Subcommittee on Insular Affairs, Oceans and Wildlife, *Hearing on H.R. 21, the Ocean Conservation, Education, and National Strategy for the 21st Century Act*, 111th Cong., 1st sess., June 18, 2009.

habitat destruction, invasive species, and overfishing. They believe that a defined ocean policy, better coordination among agencies, and more investment are needed to reflect the importance of oceans to our economy and well-being. However, others are concerned that H.R. 21 would increase the ocean-related bureaucracy by establishing numerous layers of additional laws, regulations, advisors, committees, and partnerships. At a hearing during the 110th Congress, a coalition of Alaska fishing industry groups expressed concerns that H.R. 21 would duplicate efforts, lead to more bureaucracy, conflict with other legal mandates, and result in confusion and litigation.²⁸ They would rather see greater focus on funding and implementation of current laws, such as the MSFCMA.

It remains an open question whether the 111th Congress will act on this comprehensive approach to ocean policy or concentrate on specific subjects or issues. On November 4, 2009, the Senate Commerce, Science, and Transportation Committee's Subcommittee on Oceans, Atmosphere, Fisheries, and Coast Guard held a hearing concerning the future of ocean governance that focused on IOPTF activities.²⁹ In addition to comprehensive ocean approaches, over 70 bills related to ocean and Great Lakes management, climate change, fisheries, coastal conservation, marine animals, marine sanctuaries, research, education, and transportation have been introduced. For example, on September 24, 2009, the Ocean, Coastal, and Watershed Education Act (H.R. 3644) was introduced, and on January 19, 2010, it was passed by the House. This bill would direct NOAA to further develop regional education and watershed programs and to establish a competitive national grant program to advance environmental literacy. Administration action, or inaction, is likely to continue to receive congressional oversight during the 111th Congress.
