## Exemptions from Environmental Law for the Department of Defense: An Overview of Congressional Action

David M. Bearden  
Analyst in Environmental Policy  
Resources, Science, and Industry Division

### Summary

Several environmental statutes contain national security exemptions, which the Department of Defense (DOD) can obtain on a case-by-case basis. Since FY2003, DOD has sought broader exemptions that it argues are needed to preserve training capabilities and ensure military readiness. There has been disagreement in Congress over the need for broader exemptions in the absence of data on the overall impact of environmental requirements on training and readiness. There also has been disagreement over the extent to which broader exemptions would weaken environmental protection. After considerable debate, the 107<sup>th</sup> Congress enacted an interim exemption DOD requested from the Migratory Bird Treaty Act, and the 108<sup>th</sup> Congress enacted a broad exemption from the Marine Mammal Protection Act and a narrower one from certain parts of the Endangered Species Act. These exemptions were contentious to some because of concern about the weakening of protections for animal and plant species. In the 109<sup>th</sup> Congress, DOD has again requested exemptions from the Clean Air Act, Solid Waste Disposal Act, and Comprehensive Environmental Response, Compensation, and Liability Act. These exemptions have prompted opposition from some states and communities that are concerned about possible risks to human health from potential exposure to air pollution and hazardous substances. This report will be updated as relevant developments occur.

### Introduction

Over time, Congress has included exemptions in several environmental statutes to ensure that requirements of those statutes would not restrict military training needs to the extent that national security would be compromised. These exemptions provide authority for suspending compliance requirements for actions at federal facilities, including military installations, on a case-by-case basis. Most of these exemptions may be granted for activities that would be in the “paramount interest of the United States,” whereas others

are specifically for national security.<sup>1</sup> Most of these exemptions are limited to one year, but can be renewed.<sup>2</sup> The extent to which broader exemptions from environmental requirements are needed to preserve military readiness capabilities has become a prominent issue.

DOD argues that exemptions obtained on a case-by-case basis are onerous and time-consuming because of the vast number of training exercises that it conducts on hundreds of military installations. DOD also argues that the time limitations placed on most exemptions are not compatible with many ongoing or recurring training activities. Instead, DOD has sought broader exemptions from certain environmental requirements that it argues restrict or delay training activities necessary to maintain readiness. As part of its annual defense authorization proposal for FY2003, DOD proposed a Readiness and Range Preservation Initiative, requesting certain exemptions from six environmental laws: Migratory Bird Treaty Act, Endangered Species Act, Marine Mammal Protection Act, Clean Air Act, Solid Waste Disposal Act,<sup>3</sup> and Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA).

DOD's request for broader exemptions has been contentious in Congress. Some Members assert that such exemptions are necessary to provide greater flexibility for conducting combat training and other readiness activities without restriction or delay. However, other Members, states, environmental organizations, and communities have opposed broader exemptions, pointing to the lack of data to demonstrate the extent to which environmental requirements may have restricted training exercises and compromised readiness overall. They argue that expanding exemption authority without justification for its need would unnecessarily weaken environmental protection.

After considerable debate, the 107<sup>th</sup> Congress enacted the exemption DOD requested from the Migratory Bird Treaty Act, and the 108<sup>th</sup> Congress enacted exemptions from the Marine Mammal Protection Act and certain parts of the Endangered Species Act. Although these exemptions were contentious among those concerned about the weakening of protections for animal and plant species, there has been greater opposition to exemptions DOD has requested from the Clean Air Act, Solid Waste Disposal Act, and CERCLA. Opponents to exemptions from these three statutes have expressed concern about risks to human health from the potential exposure to air pollution and hazardous

---

<sup>1</sup> The following environmental statutes authorize the President to grant exemptions for federal facilities, including military installations, on a case-by-case basis. Exemptions for activities in the "paramount interest of the United States," including national security, are provided in the Clean Air Act (42 U.S.C. 7418(b)), Clean Water Act (33 U.S.C. 1323(a)), Noise Control Act (42 U.S.C. 4903), Resource Conservation and Recovery Act (42 U.S.C. 6961(a)), and Safe Drinking Water Act (42 U.S.C. 300(j)(6)). An exemption specifically for national security is provided in the Comprehensive Environmental Response, Compensation, and Liability Act (42 U.S.C. 9620(j)). The Endangered Species Act (16 U.S.C. 1536(j)) also authorizes a special committee to grant an exemption if the Secretary of Defense finds it necessary for national security. See CRS Report RS21217, *Exemptions for Military Activities in Federal Environmental Laws*.

<sup>2</sup> The Safe Drinking Water Act does not impose time limits on exemptions. Although the Endangered Species Act allows time limits, the law does not require it.

<sup>3</sup> The Solid Waste Disposal Act is popularly referred to as "RCRA," the Resource Conservation and Recovery Act of 1976, which amended the Solid Waste Disposal Act in that year.

substances. Neither the 107<sup>th</sup> nor the 108<sup>th</sup> Congress enacted these exemptions. DOD has proposed them again in the 109<sup>th</sup> Congress, as part of its FY2006 defense authorization legislative proposal, arguing again that critical training could be restricted otherwise.

The following sections of this report discuss the difficulty of assessing the impact of environmental requirements on military readiness, broader exemptions for military activities that Congress has enacted, and DOD's request for additional exemptions.

## **Impact of Environmental Requirements on Readiness**

There has been ongoing disagreement as to whether existing authorities for case-by-case exemptions from environmental requirements are sufficient to preserve military readiness capabilities. Assessing the need for broader exemptions is difficult because of the lack of data on the cumulative impact of environmental requirements on military readiness. Although DOD has cited some examples of training restrictions or delays at certain installations and has used these as the basis for seeking legislative remedies, the department does not have a system in place to comprehensively track these cases and determine their impact on readiness.

In 2002, the General Accounting Office (GAO, now renamed the Government Accountability Office) found that DOD's readiness reports did not indicate the extent to which environmental requirements restrict combat training activities, and that such reports indicate a high level of readiness overall.<sup>4</sup> However, GAO noted individual instances of environmental restrictions at some military installations, and recommended that DOD's reporting system be improved to more accurately identify problems for training that might be attributed to restrictions imposed by environmental requirements. A 2003 GAO report found that environmental restrictions are only one of several factors, including urban growth, that affect DOD's ability to carry out training activities, and that DOD continues to be unable to broadly measure the impact of encroachment on readiness.<sup>5</sup>

The lack of comprehensive data to assess the need for DOD's request for exemptions from the Clean Air Act, Solid Waste Disposal Act, and CERCLA prompted the 108<sup>th</sup> Congress to include a reporting requirement in Section 320 of the National Defense Authorization Act for FY2004 (P.L. 108-136). This section requires the Secretary of Defense to conduct a study of the impact of compliance with these three statutes on military operations and to report his findings to Congress. DOD expects to complete this study by January 2006. Until then, comprehensive information on the impacts of these statutes on military training is likely to remain unavailable.

## **Exemptions Enacted in the 107<sup>th</sup> and 108<sup>th</sup> Congress**

As noted above, the 107<sup>th</sup> Congress enacted an interim exemption for military readiness activities from the Migratory Bird Treaty Act, and the 108<sup>th</sup> Congress enacted

a broad exemption from the Marine Mammal Protection Act and a narrower one from certain parts of the Endangered Species Act. Throughout the congressional debate over these exemptions, there was significant disagreement among Members of Congress regarding the military need for them in light of the lack of data on the effect of these statutes on readiness overall, and the potential impact of the exemptions on animal and plant species. A summary of each exemption is provided below.<sup>6</sup>

**Migratory Bird Treaty Act.** Section 315 of the National Defense Authorization Act for FY2003 (P.L. 107-314) directed the Secretary of the Interior to develop regulations for the issuance of permits for the “incidental takings” of migratory birds during military training exercises, and provided an interim exemption from the Migratory Bird Treaty Act while these regulations are being drafted. A U.S. district court had ruled that federal agencies, including DOD, are required to obtain permits for incidental takings,<sup>7</sup> and DOD argued that an exemption was needed to prevent the delay of training activities while regulations were being developed. The regulations were proposed on June 2, 2004,<sup>8</sup> and the interim exemption will remain in effect until they are finalized.

**Endangered Species Act.** Section 318(a) of the National Defense Authorization Act for FY2004 (P.L. 108-136) granted the Secretary of the Interior the authority to exempt military lands from designation as critical habitat under the Endangered Species Act, if the Secretary determines “in writing” that an Integrated Natural Resource Management Plan for such lands provides a “benefit” to the species for which critical habitat is proposed for designation. The U.S. Fish and Wildlife Service had been allowing these plans to substitute for critical habitat designation in recent years. DOD argued that clarification of the authority for this practice was needed to avoid future designations that in its view could restrict the use of military lands for training. Section 318(b) also directs the Secretary of the Interior to consider impacts on national security when deciding whether to designate critical habitat. Although these provisions affect the applicability of critical habitat requirements on military lands, DOD continues to be subject to all other protections provided under the Endangered Species Act, including consultation requirements and prohibitions on the “taking”<sup>9</sup> of endangered and threatened species.

**Marine Mammal Protection Act.** Section 319 of P.L. 108-136 provided a broad exemption from the Marine Mammal Protection Act for “national defense.” Section 319 also amended the definition of “harassment” of marine mammals, as it applies to military readiness activities, to require greater scientific evidence of harm, and required the

<sup>9</sup> As defined in federal statute, “taking” means to harass, harm, pursue, hunt, shoot, wound, kill, trap, capture, or collect, or to attempt to engage in any such conduct (16 U.S.C. 1532(19)).

consideration of impacts on military readiness in the issuance of permits for incidental takings. DOD had argued that these amendments were necessary primarily to prevent restrictions on the testing of the Navy's low-frequency "active" sonar system. Environmental organizations had legally challenged the use of the sonar system, arguing that it harmed marine mammals and was therefore a violation of the Marine Mammal Protection Act, as well as other environmental statutes.<sup>10</sup>

## **Exemptions Proposed by DOD in the 109<sup>th</sup> Congress**

DOD submitted its FY2006 defense authorization legislative proposal to Congress on April 7, 2005.<sup>11</sup> Similar to past proposals since FY2003, the current proposal includes exemptions from certain requirements of the Clean Air Act, Solid Waste Disposal Act, and CERCLA. DOD and some Members of Congress argue that these exemptions are necessary to preserve training capabilities needed to ensure military readiness, and that they would have a minimal impact on environmental quality. Other Members, states, communities, and environmental organizations counter that the impacts reach beyond DOD's stated intent. Each proposed exemption is summarized below.

**Clean Air Act.** Section 313 of DOD's legislative proposal would exempt emissions generated by military readiness activities from requirements to "conform" to State Implementation Plans (SIPs) for achieving federal air quality standards. Under current law, sources of emissions, including activities of federal agencies, that would increase emissions beyond limitations established in a state's SIP are prohibited, unless offsetting reductions from other sources are made in the same area. DOD argues that its proposed exemption would provide greater flexibility for transferring training operations to areas with poor air quality, without the possibility of restrictions on these operations due to the emissions that they would produce.

DOD has argued that the activities in question (many of which involve the reassignment of aircraft from one installation to another) have a small impact on air quality. In most areas, the threshold for imposition of the conformity requirement is a net increase of 100 tons of emissions annually, a threshold that translates to a net increase of more than 72,000 military aircraft takeoffs and landings annually. Whether such an increase is, in fact, "small" is one issue raised by opponents, including state and local air pollution control program officials, state environmental commissioners, state attorneys general, county and municipal governments, and environmental organizations.

The proposal also would alter Clean Air Act requirements for those nonattainment areas in which DOD would be conducting non-conforming readiness activities, resulting in weaker health-based standards for ozone, carbon monoxide, and particulates (PM<sub>10</sub>) in these areas. These areas would be allowed to demonstrate that they would have met the standard except for emissions from readiness activities. In addition, the proposal would remove the consequences of failure to attain the standards in such areas — that is, an area could not be forced to impose more stringent pollution control requirements if its failure to meet air quality standards was the result of emissions from readiness activities.

<sup>10</sup> NRDC v. Evans, 232 F.Supp. 2d. 1003, 1055 (N.D. Cal. 2002).

<sup>11</sup> The full text of the proposal and supporting documents are available on DOD's Office of Legislative Counsel's website at [<http://www.defenselink.mil/dodgc/olc/legispro.html>].

**Solid Waste Disposal Act and CERCLA.** Section 314 of DOD’s legislative proposal would amend the definition of “solid waste” in the Solid Waste Disposal Act and “release” (or threatened release) in CERCLA, to exclude military munitions on an operational range. The proposed exemption uses the definition of operational range in current law,<sup>12</sup> under which DOD has the discretion to designate practically any lands under its jurisdiction as operational, regardless of whether the land is currently being used for training. Opponents argue that, in effect, this exemption would place military munitions on operational ranges entirely beyond the reach of these two statutes, and could allow munitions and any resulting contamination to remain indefinitely on any military lands designated as operational. The proposal specifies that the exemption would no longer apply once a range ceases to be operational. It therefore would not apply to ranges on closed bases once the land is transferred out of the jurisdiction of DOD.<sup>13</sup>

DOD argues that its proposal would codify existing federal regulations under the Military Munitions Rule, promulgated by the Environmental Protection Agency in 1997.<sup>14</sup> Under this rule, “used or fired” munitions on a range are considered a solid waste only when they are removed from their landing spot.<sup>15</sup> Until DOD removes them and they “become” solid waste, they are not subject to disposal requirements. Munitions left to accumulate on a range can leach hazardous constituents into the soil and groundwater over time, possibly requiring cleanup. DOD states that it seeks to codify the munitions rule in order to eliminate the possibility of legal challenges to existing regulations, which might result in an active range being closed to require the removal of accumulating munitions and cleanup of related contamination. DOD asserts that such challenges could restrict training, citing a citizen suit at Fort Richardson in Alaska in 2002 that threatened to stop live-fire exercises because of contamination leached from munitions.

However, excluding military munitions from the definitions of “solid waste” and “release” in federal statute could have broader implications for cleanup than in existing regulation. Those opposed to these statutory changes include some state attorneys general, state waste management officials, municipal water utilities, environmental organizations, and community groups. They argue that the exemption would narrow the waiver of federal sovereign immunity in states, resulting in the removal of state authority to monitor groundwater on an operational range to determine if a substance presents a health hazard, or to file citizen suits under the Solid Waste Disposal Act or CERCLA to compel cleanup of that substance. If this were the case, they argue, groundwater contamination could not be investigated until it migrates off-range, potentially resulting in greater contamination and higher cleanup costs than if the contamination were identified and responded to earlier. Opponents also assert that the potential *threat* of litigation is not a sufficient basis for a broad change to cleanup laws.
